

# AudioScart

Smart automatic scart switches  
for correct sound

When connecting a listening device to a TV-set, the output sound from the SCART-connector is always from the TV-tuner. If other devices, VCR, SAT-converter, etc., is used, the TV sound is still heard in the listening device. This could often be solved by setup the SCART in/out using the remote control each time the VCR/SAT is used why this has become a frequent problem.

The solution is the smart AudioScart. Connect it to TV, VCR, SAT or a digital converter and AudioScart automatically feed the correct sound in your hearing aid. The active AudioScart senses which SCART device that is active and it is powered by a built-in lithium battery. The expected lifetime is extremely long, more than 5 year. Lithium batteries have a normal store time of about 5-10 years.

To connect the AudioScart

AudioScart product overview

Part No	Description
284025	AudioScart, with to 3.5mm male, built-in battery
284028	AudioScart, with to 2-pol. DIN female, built-in battery
284030	AudioScart, with SCART female, built-in battery
